PROFESSIONAL SUMMARY

Computer Science graduate targeting AI Engineering, GenAI, Data Science, and Data Analyst roles. Builds LLM agents, fine-tunes small language models, and turns messy data into dashboards and clear recommendations. Two years of teaching experience, used to explain models and data findings clearly.

TECHNICAL SKILLS

AI / LLM: LangChain, multi-agent systems, LLM tool calling, RAG, vector databases, prompt engineering, OpenRouter, LoRA/PEFT fine-tuning

Machine Learning: PyTorch, YOLOv8, OCR, Hugging Face PEFT, statistics

Data Analysis: Python (Pandas, NumPy), SQL, PostgreSQL, Excel, Power BI, Tableau, exploratory data analysis, data cleaning

Languages / Tools: Python, TypeScript, JavaScript, SQL, HTML, CSS, Git, Streamlit, Bun, Telegram Bot API

EXPERIENCE

Data Science Intern / *The Entrepreneurship Network, Remote (Delhi, India)* Apr 2025 - Sep 2025

- Built NexusClaw, a Bun/TypeScript coding assistant for exploring, planning, and modifying a local codebase through an interactive CLI.
- Integrated LLM tool calling and DuckDuckGo web research, plus an owner-restricted Telegram bot interface.
- Designed an agent loop that plans, executes, and self-corrects across multi-step coding tasks.

Freelance Tutor, Mathematics and Computer Science / *Self-Employed* Oct 2023 - Sep 2025

- Taught Mathematics (Classes 6-10) and CBSE Computer Science (Classes 11-12).

PROJECTS

Multi-Agent Research Assistant / [GitHub](#) / *LangChain, OpenRouter, Streamlit* Aug 2026

- Built a four-stage multi-agent pipeline (search, reader/scrapper, writer, critic) using LangChain to automate web search, scraping, and structured report generation.
- Implemented a critic feedback loop that reviews drafts and flags unsupported claims, improving output reliability across prompt iterations.
- Deployed as a Streamlit web app and Python CLI, with secure API key management via environment variables.

Fine-Tuning Qwen3:0.6B / [Github](#) / [Ollama](#) / *Python, PyTorch, LoRA/PEFT* Sep 2026

- Built a LoRA/PEFT fine-tuning pipeline for a small instruction-tuned model on a local dataset using CPU-only compute.
- Configured training parameters (rank, alpha, target modules) to balance model quality against limited compute.

Knight-Sight: Automatic Number Plate Recognition / [GitHub](#) / *Python, YOLOv8, OCR, Streamlit* Apr 2026

- Built a modular ANPR pipeline combining vehicle detection, license plate localization, and OCR-based text extraction, with a Streamlit dashboard and YOLOv8 training utility.
- Designed for edge-friendly deployment, balancing accuracy against inference cost for small-scale use.

Power BI Analytics Projects / *Power BI, Excel*

- Customer Churn Dashboard: end-to-end analysis of telecom subscription churn that identifies high-risk segments and delivers actionable retention insights.
- HR Analytics: employee attrition analysis on a structured dataset, visualizing key workforce trends.
- Sales Dashboard (Superstore) and Madhav Store Dashboard: sales, profit, customer, product, shipping, and order-level performance analysis for retail and e-commerce data.

Movie Industry EDA (TMDB 5000 Movies) / [GitHub](#) / *Python, Pandas, Jupyter Notebook*

- Exploratory analysis comparing financial success (revenue) against critical/audience success (rating) to understand what drives movie success.

EDUCATION

Hindustan College of Science and Technology / Sep 2022 - May 2026

Bachelor of Technology, Computer Science and Engineering

- Participant, Smart India Hackathon: Early Wheat Diseases Detection System
- Top 10 Finalist among 50 teams, Deepsight Hackathon

CERTIFICATIONS

- Certificate of Completion: Introduction to Agent Skills, Anthropic (Aug 2026)
- Prompt Engineering and AI Agents with ChatGPT, LinkedIn Learning (Jul 2026)
