EDUCATION

Dr. A.P.J. Abdul Kalam Technical University September 2022 – May 2026
Bachelor of Technology in in Computer Science and Engineering Mathura UP

EXPERIENCE

The Entrepenurship Network April 2025 – September 2025
AI Intern *Noida UP*

- Built NexusClaw, a Bun/TypeScript CLI coding assistant that lets developers explore, plan, and modify a local codebase through an interactive terminal interface.
- Integrated LLM tool calling and DuckDuckGo web research to ground responses in live information, and exposed the assistant via an owner restricted Telegram bot.
- Designed an agentic loop that plans, executes, and self-corrects across multi-step coding tasks, improving reliability on complex, open ended requests.

Carrier Compiler September 2024 – August 2025
Data Analyst Intern *Remote*

- Built interactive Power BI dashboards on sales data for a multi-course ed-tech platform, tracking course-wise enrollment, revenue, and performance trends.
- Used SQL to query and extract data, and Excel to clean and preprocess raw datasets before analysis.
- Performed statistical analysis to surface patterns and support data-driven decisions, and designed visualizations that let stakeholders compare performance across a large course catalog.

Freelance Tutor October 2023 – September 2025
Mathematics & Computer Science

- Tutored 15+ students in Mathematics (Classes 6–10) and CBSE Computer Science (Classes 11–12) through weekly one-on-one online sessions over two years.
- Built custom lesson plans and problem sets mapped to the CBSE syllabus, adapting difficulty based on each student's progress

PROJECTS

Multi-Agent Research Assistant | LangChain, OpenRouter, Streamlit

- Built a four-stage multi-agent pipeline (search → reader/scraper → writer → critic) with LangChain to automate web research, scraping, and structured report generation.
- Implemented a critic feedback loop that reviews drafts and flags unsupported claims, [adding a self-correction pass that improved factual grounding across prompt iterations].
- Shipped as both a Streamlit web app with API keys managed securely via environment variables.

Fine-Tuning Qwen3:0.6B | Python, PyTorch, LoRA/PEFT, Ollama

- Fine-tuned Qwen3-0.6B with LoRA/PEFT on a 60-PDF corpus spanning philosophy, mathematics, CS, and physics for concept explanation and step-by-step problem solving; trained CPU-only in ~5 hr (1 epoch, final loss 2.12).
- Tuned rank, alpha, and target modules for the compute budget; designed document-level splits to prevent chunk leakage between train/eval.
- Published to Ollama as gaurav-aiml/edulora (1.2 GB, 40K context) for reproducible local inference; benchmarked against base Qwen3-0.6B on held-out prompts.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS
Frameworks & Libraries: LangChain, PyTorch, Hugging Face PEFT, Pandas, NumPy, YOLOv8, Streamlit
Developer Tools: PostgreSQL, Git, bun, Power BI, Tableau, Excel, OpenRouter, Ollama
Other Skills: Multi-agent systems, RAG, vector databases, prompt engineering, LoRA/PEFT fine-tuning, OCR, statistics, Exploratory data analysis (EDA), data cleaning
